

CMPSC 64 – Computer Organization and Digital Logic Design

Syllabus – Spring 2026

Class Time:	Mondays & Wednesdays, 11:00 AM- 12:15 PM	Location:	ILP 1101
Instructor:	Dr. Ziad Matni	Email:	ziad.matni@ucsb.edu
Office Hours:	Tuesdays, 3:00 – 4:30 pm in HFH 1123 <i>or by appointment (email the prof)</i>		
Lab Sections:	Fridays, 2, 3, and 4 PM in PHELPS 3525		
Teaching Assistants:	Kali Hale Rasta Tadayon	kalihale@ucsb.edu rasta@ucsb.edu	CHECK CANVAS FOR ALL OFFICE HOUR DETAILS
Undergraduate Learning Assistants:	Riya Gupta Ivy Holiday	riyagupta@ucsb.edu iholiday@ucsb.edu	
Class Main Website:	Canvas	Canvas website	
Assignment Submissions:	Gradescope	Gradescope website	
Q&A/Discussion Site:	Piazza	Piazza website for CS64 S26	

Syllabus Contents

A.	Class Overview and Pre-Requisites	2
B.	Textbooks and Other Learning Material	2
C.	How to succeed in this course	3
D.	A Note on Conduct: A Shared Expectation of Respect	3
E.	Where Do I Find Stuff?	4

K.	Late Policy and Make Up Policy – PLEASE READ!	6
L.	Note to Students with Disabilities	6
M.	Grading	7
N.	Class Grade Distributions	7
O.	Class Schedule	8
P.	UCSB and Instructor's Policies on Academic Integrity and Honesty	9
Q.	Use of LLMs in the course	10
R.	Non-discrimination policies	10
S.	Statement on sexual harassment	10
T.	Mandatory reporting	10
U.	Mental health	10
V.	Additional Campus Resources	11

A. Class Overview and Pre-Requisites

Have you ever wondered how a computer actually computes? Deep beneath your phone's glossy exterior and flashy screen, a network of literally miles of wires carries information between many billions of little switches that, when working properly, allow you to run your favorite app. This class is the beginning of the story of how that happens. We will explore the fundamental principles of computing hardware, what it "means" for a program to actually run on a computer, and start to drill down through intricately stacked layers of abstraction that make what you call a "computer" even possible. Along the way you will learn some assembly language programming, you will better understand how and why computers are organized the way they are, and how to actually start to build your own computers using the basic digital logic design elements of gates, combinational circuits, flip-flops, and much more. You are expected to have taken and passed (i.e., C grade or higher) **CMPSC 16** (or **CMPTGCS 1A**) before you take this course, as well as **MATH 3C/4A**.

What you need to know BEFORE you take this course

It is very important that you took **CMPSC 16** as we will be referring *a lot* to memory maps, pointers, and C/C++ code. You are also expected to be familiar with using the **UNIX command line** to navigate folders, view files, and compile and run programs. In addition, you must have a **College of Engineering UNIX account** ready to use by the end of the first week of class.

What you will learn by the end of this course

You'll have the opportunity to learn all of these things (though not necessarily in this order):

- Computer organization concepts
- Binary arithmetic and logic operations
- Assembly programming language for 32-bit MIPS architecture, including:
 - Basic arithmetic & variable use
 - Flow control (branching)
 - Memory addressing
 - Functions and function calls
- Basic digital logic design, including:
 - Logic gates and truth tables
 - Combinatorial logic
 - Sequential logic
 - Finite state machine

B. Textbooks and Other Learning Material

(also used in CS 154 – so keep this copy!!)

This textbook is **very highly recommended** (especially if you also decide to take CMPSC 154, the follow up to this course). The book is also available to be checked out at the UCSB library:

Patterson, D.A., & Hennessy, J.L. (2013). *Computer Organization and Design: The Hardware/Software Interface*, **5th** edition. Morgan Kaufmann.

You can get the (newer) 6th edition instead, but some references may be different.

I will also give you **several handouts to read (required)**. These will be announced in class/posted on Canvas.

C. How to succeed in this course

- Come to all the lectures: there are only 10 weeks and we're covering a LOT of stuff!
- Take good notes: *I will provide you with worksheets to help you do this!*
- **PRACTICE CODING and DEBUGGING WITHOUT THE HELP OF A.I.**
 - A.I., in itself, is not a bad tool, BUT in foundation courses like this one, you NEED to be able to understand ALL the concepts WITHOUT help from an A.I. tool! Save the A.I. tool for more complicated tasks!
 - Absolutely go over the example codes I give you, but GO BEYOND that as well!
 - When stuck, tracing the steps of your program, and explaining your approach to another person (but *without* sharing your code!) is super-helpful!
- Start your homework early so that you have more chances to ask for help
- Ask us questions often: in class, in section, on Piazza
- Get to know your professor and come to office hours! (good advice for ALL your courses!)

D. A Note on Conduct: A Shared Expectation of Respect

Our opportunity to go through this really interesting material together is something that I very much enjoy teaching. I truly believe every student entering my class is more than capable of mastering this material with some hard work, curiosity, and persistence. Your instructional team will be working hard for you, and while we are far from perfect, you should never expect anything less than dignity and respect in 100% of our interactions. We, in turn, expect the same from you. As professionals, or professionals in training, we are all responsible to treat the members of this academic community (e.g. your peers, our staff and faculty, and even yourself) respectfully and professionally. With this as our foundation I know we can build some wonderful things.

Additionally, I do expect you to be responsible for your own learning and to ask questions. We will always strive to make the classroom, the lab, and our offices safe spaces for you to ask questions and to learn and, yes, even to make mistakes. *Believe it or not, making mistakes is one of the most effective ways to learn!*

Finally, I do expect you to do your own work at all times. Please familiarize yourselves with the university's policies on *academic integrity and honesty* and **READ** the section in *this syllabus* that details this further (in **Section P**). Understand and follow my policy towards the use of LLMs, like ChatGPT or Claude, etc. (see **Section Q**). Failure to comply with these policies will result in a zero grade and likely incur additional penalties. On a related note, please do NOT take pictures or videos in class unless given clear permission from me.

E. Where Do I Find Stuff?

All information you need about what today's lecture is, to what homework or lab is due today, is found in **THIS SYLLABUS**! Please read this syllabus in its entirety as it contains all the important information on how this class runs and what my policies are – I will quiz you about it (for points!)

All material (class slides, example codes, all assignments, grades, etc.) will be listed on our **main website** ([Canvas](#)). Please check out our website and familiarize yourselves with it as soon as possible.

All questions you have should be posted on our class' [Piazza](#) site. I encourage EVERYONE to participate on Piazza and answer each other's questions to the best of your ability. My team and I will observe Piazza postings and chime-in when needed!

F. Coding and Software Particulars for this Course

For a large part of this course, we will be programming in MIPS assembly language. We will use a MIPS *emulator software* to run our programs – more will be explained in lecture. This software is available for use on the CSIL machines on Linux command line, which students can also access remotely via **ssh**.

G. Assistance to Students

01. Office Hours

I very highly recommend that you come to office hours! Not just for the professor, but also for the instructional staff (TAs and ULAs). *And not just for this course, but for all of them!*

It can help clarify course material for you and help you how to best study for the course, approach your assignments, and prepare for quizzes and exams. It furthermore creates and facilitates professional relationships between yourself and the professor and the instructional staff. Educational research shows that student engagement is associated with academic success!

Do's of Office Hours:

- **Do** go to office hours regularly starting in the first week!
- **Do** prepare some specific questions: these may be related to the material or syllabus (*do* read the syllabus!)
- **Do** ask how the professor recommends approaching or preparing for the work you have to do
- **Do** talk about your aspirations or goals!
- **Do** feel comfortable asking the professor about how they got into their field and their professional life journey

Don'ts of Office Hours:

- **Don't** be too intimidated: you *really* can ask *anything* you like about the course (or CS, or industry, or grad-school, etc.)
- **Don't** expect to be given *direct* answers to the assignments

02. Lab Sections

The lab sections are run by the TAs and ULAs. These are excellent spaces to ask questions and seek help too! Always attend these!

03. Piazza

If you have particular questions, you can also ask them on **Piazza**, day or night. Someone from the instructional staff will get back to you quickly, usually within 24 hours. Get into the habit of helping out your peers if they ask a question that you know the answer to! You can also see if anyone's asked the same question and received an answer, so make it a habit to check Piazza many times a week. See if you can answer your fellow students' questions yourself! Please do **not** use Piazza to post outright solutions to homework problems – you can, of course, *discuss* the exercises and ways to solve the problems all you like!

04. Email

If you need to email the professor because you'd rather not share your question on Piazza with anyone else (e.g., a personal question), please feel free to do so, *but please indicate which course you are in* (i.e., put “CS64” in the subject line!). Please use *direct* email and do not send messages thru Canvas, as we don't always read those in time.

All office hours (prof's, TAs', ULAs') are listed on the 1st page of the course's Canvas site.

We try not to change them once they're established in Week 1, but sometimes we unfortunately have to: if that happens we will make an announcement on Piazza and we will update the Canvas page.

H. Participation and Attendance

I will often ask for participation from students. Your active participation *will* make a difference in your learning and your final class grade! I will do this in the form of poll questions in class using **iClicker**, a free tool that can be used from a smart phone or laptop computer. Follow [this link](#) to sign up for iClicker. Students are expected to keep up their attendance of lectures, although I will not actively take attendance in class (after Week 1). The TAs will take attendance in labs. Missing more than 2 lab section attendances in the quarter will affect the student's course grade negatively, proportionally to the number of missed sections beyond 2.

I. Assignments

CS 64 has homework assignments that are issued weekly. Some of these assignments (but not all) will be programming assignments. Students are expected to adhere to the course's strict **late policy** (see **Section K**). Assignments are typically due every **Monday by 11:59 PM** (*unless told otherwise*) and have to be submitted using the **Gradescope** tool. *You can only turn in your assignments on **Gradescope**, so we will not accept nor grade assignments emailed to us.*

Your homework assignment will be given to you as a **PDF** document. You should submit your homework as a **PDF** file on Gradescope. ***No format other than PDF will be accepted and graded.*** You are solely responsible for making sure that what you uploaded onto Gradescope is correct and on-time. Sometimes, your assignment contains programming exercises (in assembly): you'll be given directions on how to upload your programs onto Gradescope.

Students are allowed to work together on homework in **groups of two** (but not more!), and may discuss assignment solution details within the group and with other class members. However, each member of the group is still accountable for their own work (***and every individual should turn in a separate assignment***). Students may change groups between assignments, *though not within an assignment*. Forming groups is *optional*; students may work alone if they want.

Please, **do not copy material from somewhere else (including online sources, other people, etc...)**

WITHOUT giving it proper citation – otherwise, it WILL be considered plagiarism (once more, please familiarize yourselves with my policy and the University’s policy on plagiarism).

You do not have to cite something the instructor or the TAs explicitly said in lecture or lab (unless directed otherwise). You DO have to cite your use of online resources (including ChatGPT and other LLMs/AIs).

If you believe that a grade on an assignment question is wrong, you may ask for a review for a possible re-grade using Gradescope’s “*Regrade Request*” feature. Note: such requests will only be made available for 3 days after an assignment grade has been released. You should have a good reason to ask for a regrade and understand that it is not a guarantee of a grade change. You can ask questions like “why did I get this wrong?” or “can you please re-check the grading on this”, but please don’t ask questions like, “why did you make this worth X pts?” (reason: assigning points is our prerogative).

J. Quizzes and Exams

This course has the following exams:

- 4-5 quizzes (the dates are listed in the **Class Schedule** in **Section O**), and
- a *final exam* on **Thursday, June 11** (as set by the University).

All of the above will be taken in-person and in our classroom. Taking the final exam is **required** to pass the course. ***There are absolutely NO make ups for missed quizzes or exams.***

More details on these exams will be provided at a later date.

Quizzes will take place, roughly every 2 weeks, at the *beginning* of lecture time (i.e., begins at 12:30 PM *sharp*) and usually take between 10-15 minutes to complete. If you arrive late to class when there is a quiz, you may not be able to take the quiz (and thus get a zero grade on that), so please endeavor to be on-time, if not a little early, on quiz days. The remainder of that class time will involve a new lecture.

K. Late Policy and Make Up Policy – PLEASE READ!

A late assignment submission means **submitting 24 hours after a deadline**. Late submissions will result in a **20% penalty**. Anything submitted *beyond* the deadline + 24 hours will receive a **zero**. No makeup is allowed for assignments except in rare cases, if there is a documented family emergency, documented extended illness, documented required court appearance, or other situation beyond the students' control (with documentation), then the professor *may* grant additional make up days entirely at the instructor's discretion – but this is **not** a guarantee or a right.

No makeup is allowed for missed quizzes, tests, or exams whatsoever.

L. Note to Students with Disabilities

Please register your accommodation requests with DSP at your very earliest opportunity – this is best done by the first or second week of the quarter. Make sure that you submit your DSP request *no later than one week before a scheduled exam*. The instructor will accommodate students only according to information gotten from the DSP office. See **Section V (Additional Campus Resources)** for contact details for the DSP Office.

**M. Grading**

Item	Grade %	Notes
In-class Participation	2%	Done via iClicker and at the professor's discretion.
Assignments	28%	All assignments are equally weighed.
Quizzes	30%	See Section O for dates. In-person, required, no makeup.
Final Exam	40%	See Section O for date. Cumulative, in-person, required, no makeup.
TOTAL	100 %	

N. Class Grade Distributions

These are calculated to 2 decimal places and very strictly assigned.

Range	Grade	Range	Grade
[93 – 100]	A	[77 – 80)	C+
[90 – 93)	A-	[73 – 77)	C
[87 – 90)	B+	[70 – 73)	C-
[83 – 87)	B	[60 – 70)	D
[80 – 83)	B-	< 60	F

[X – Y) means “X to Y inclusive of X (but not Y)”

A+ grades: These may be awarded to the *very* best performing students in the class—but the cutoff for A+ grades will be determined at the end of the course *at the discretion of the instructor* (there is no pre-determined cutoff--an average of 97 or more doesn't guarantee you an A+ grade.) If I decide to curve the grade (it's not guaranteed that I will), I will do so on the final class scores and not on any individual item.

F grades: *If you miss your final exam, you will receive an F, regardless of your running score in the class.* If you feel that I or the TAs have made a mistake (like adding up a grade incorrectly), then you should certainly bring that to my attention in an expedient fashion (within one week's time), **but please do not engage in grade-grubbing** (for example, do NOT ask me to round up your final class grade at the end of the quarter). If you have any questions about how grades are computed, please feel free to ask, and I would be happy to explain further.

**0. Class Schedule***The lecture topics are subject to change or re-arrangement.*

Wk	Dates	Topic(s)	Readings from Book or Handouts	Assignments Due
1	3/30 4/1	Intro to the course; Numerical bases Binary Arithmetic & 2s complement	<i>Handout #1</i>	-
2	4/6 4/8	Binary logic operations QUIZ 1 ; Assembly: intro; processing a program	<i>Handout #2</i>	Assignment 1
3	4/13 4/15	Assembly: i/o and types of instructions Assembly: flow control (branches & loops)	<i>Handout #2</i>	Assignment 2
4	4/20 4/22	Assembly: accessing memory QUIZ 2 ; Assembly: accessing memory; instruction assembly	<i>Handout #3</i>	Assignment 3
5	4/27 4/29	Assembly: instruction assembly Assembly: functions and the stack	<i>Handout #4</i>	Assignment 4
6	5/4 5/6	Assembly: MIPS Calling Convention; Recursive functions QUIZ 3 ; Intro to Digital Logic Design	<i>Handout #5</i>	Assignment 5
7	5/11 5/13	Digital Design: Intro to Digital Logic Design, Logic Algebra Digital Design: Combinatorial logic, K-Map Simplification	<i>Handout #6</i>	Assignment 6
8	5/18 5/20	Digital Design: Muxes, ALUs QUIZ 4 ; Introduction to Sequential logic	Appendix B.1 thru B.4	Assignment 7
9	5/25 5/27	No Class on Monday, 5/25 – Memorial Day Digital Design: CPU Design	Appendix B.5 thru B.10	Assignment 8
10	6/1 6/3	QUIZ 5 ; Digital Design: Finite State Machines 1 Digital Design: Finite State Machines 2	Appendix B.5 thru B.10	Assignment 9
11		FINAL EXAM on Thursday, June 11 at 12:00 PM		

NOTE:

- This syllabus and schedule are subject to change. The professor will do his best to convey changes in a timely fashion to the students, if they occur. If a change is made to the syllabus it will be announced AND the version of the syllabus will be incremented (e.g. from v0 to v1).
 - This is version 2 (v2) of the syllabus. Updates from the draft were: class schedule updates.
- Homework assignments are always **due on Mondays by 11:59 PM** unless told otherwise. *Late submissions are penalized or given zeros (see my policy).*

P. UCSB and Instructor's Policies on Academic Integrity and Honesty

Academic Integrity

It is expected that students attending the University of California understand and subscribe to the ideal of academic integrity, and are willing to bear individual responsibility for their work. Any work (written or otherwise) submitted to fulfill an academic requirement must represent a student's original work. **Any act of academic dishonesty, such as cheating or plagiarism, will subject a person to University disciplinary action.** Using or attempting to use materials, information, study aids, or commercial "research" services not authorized by the instructor of the course constitutes cheating. Representing the words, ideas, or concepts of another person without appropriate attribution is plagiarism – *this includes utilizing answers obtained from artificial intelligence (AI) programs and applications*. Whenever another person's written work is utilized, whether it be a single phrase or longer, quotation marks must be used and sources cited. Paraphrasing another's work, i.e., borrowing the ideas or concepts and putting them into one's "own" words, must also be acknowledged.

I will report the violation to the Associate Dean of Students for possible referral to the Conduct Committee. That committee has the authority to impose a range of sanctions, including suspension.

Further information is available at: <https://studentconduct.sa.ucsb.edu/academic-integrity>

Cheating on exams/quizzes

I have never released an exam/quiz from a previous quarter. Thus, *any* exam/quiz from a previous quarter that you get hold of *must have been illegally obtained*. If you come across a previous quarter's quiz or midterm or final, you are under the obligation of the university's "code of conduct" to surrender it (and all copies of it) to me. If, however, you choose to study from a previous quarter's midterm or final, no matter how that exam came into your possession, be aware that *you are cheating*, and if found out will receive a **zero**. Furthermore, if I discover that a particular organization (e.g., sorority, fraternity, or other club) provides to students or maintains an archive of any of my previous exams, I will file a code of conduct complaint with the University against the organization.

During exams, you may not look at another student's test or answers, share your answers/test with another student, nor remove a test from the exam room. All of these behaviors are forms of **cheating** and will result in a **zero** on the exam, at minimum.

Inappropriate Use of Course Materials

My lectures and course materials, including PowerPoint presentations, tests, outlines, and similar materials, are protected by U.S. copyright law and by University policy. I am the exclusive owner of the copyright in those materials I create. You may take notes and make copies of course materials for your own use. You may also share those materials with another student who is enrolled in or auditing this course.

You may not [reproduce, distribute or display \(post/upload\)](#) lecture notes or recordings or course materials in any other way — whether or not a fee is charged — without my express prior written consent. You also may not allow others to do so. If you do so, you may be subject to student conduct proceedings under the **UC Santa Barbara Student Code of Conduct**. Similarly, you own the copyright in your original papers and exam essays. If I am interested in posting your answers or papers on the course web site, I will ask for your written permission.

Q. Use of LLMs in the course

Large Language Models (LLM), like ChatGPT and others, are very commonly used by students and I, for one, do not want to ban their use. However, like any powerful tool, these LLMs have to be used **responsibly** by the students. This means that if you do use an LLM in your assignments, you have to **(a)** use the tool sparingly (i.e., in a small way only), **(b)** check that the answer given is indeed correct (they aren't always!), **(c)** cite the use of the tool in your answer, along with the prompt(s) you used to get your answer, and **(d)** be prepared to answer an oral question by the professor to demonstrate your understanding of your answer. *Failure to do any of these steps can and will result in plagiarism charges and the consequences spelled out in **Section P** of this syllabus.*

R. Non-discrimination policies

Under Title IX, university students are protected from harassment and discrimination based on gender and sex. If a student feels uncomfortable or in need of support at any time related to their gender, sex, and/or sexual orientation, please contact your TA and/or course instructor immediately. If a student would like to disclose information related to pronouns, name changes, or identities, we encourage you to do so. UCSB's Resource Center for Sexual and Gender Diversity on the 3rd floor of the Student Resource Building is also available to advocate and be of and support to students.

All students have the right to learn and participate in a classroom environment free of intimidation, harassment, and discrimination based on characteristics such as gender, race, age, sexual orientation, disability, religious or political beliefs and affiliations. I will address any related issues that surface immediately; *please help me to cultivate a positive classroom environment by communicating any concerns that you have.*

S. Statement on sexual harassment

UCSB does not tolerate sexual harassment/sexual violence, which is prohibited by University policy and state and federal law. The Title IX Compliance and Sexual Harassment Policy Compliance Office (TIX/SHPC) assists in preventing and resolving and investigating complaints of sexual harassment/sexual violence and gender discrimination. <https://titleix.ucsb.edu/>

T. Mandatory reporting

As an instructor, one of my responsibilities is to help create a safe learning environment on our campus. I want to ensure that students feel they can speak to me, but I also want students to be informed that I have a mandatory reporting responsibility related to my role as an instructor. I am required to share information regarding sexual misconduct or information about a crime that may have occurred on UCSB's campus or in the community. A result of my mandated report will be that students will receive outreach and resources from the campus Title IX office. Students may speak to someone confidentially by contacting CARE, Campus Advocacy, Resources & Education at the 24/7 advocacy line at (805) 893-4613 or visit them in person at the Student Resource Building.

U. Mental health

On top of the usual stress factors, switching to in-person education may require some mental adjustment or create additional stress. Personal concerns such as stress, anxiety, relationships, depression, cultural differences, can interfere with the ability of students to succeed and thrive. For helpful resources, please contact UCSB Counseling & Psychological Services (CAPS) at 805-893-4411 or visit <https://caps.sa.ucsb.edu/>

V. Additional Campus Resources

If you experience difficulty in this course for any reason, please don't hesitate to contact your instructor. The following campus services might also be beneficial to you. Please use them as needed.

Disabled Students Program

Location: 2120 Student Resources Building | 805.893.2668 | <http://dsp.sa.ucsb.edu/>

The Disabled Students Program offers many services, such as reading services, notetaking assistance, test-taking accommodations, and registration assistance. For more information on these services, eligibility, and registration, please call or visit the Disabled Students Program office.

CSO Safety Escorts

805.893.2000 | <https://www.police.ucsb.edu/cso/cso-safety-escorts>

The CSO (Community Service Organization) Escort Program is a free service provided to all students, faculty and community members during the evening and early morning hours. The objective of the escort service is to provide a safer mode of transportation through campus and Isla Vista. The escort service is based on the "buddy" system which is to simply provide another person to travel with you to your destination. The CSO Escort Service can be used by simply calling the Police Dispatch through the Escort Phone Line at 893-2000. Escorts can also be requested through the Red Emergency Phones located all over campus.

Food For All

If you are facing any challenges securing food or housing, and believe this may affect your performance in the class, you are urged to meet with a Food Security and Calfresh Advocate, who is aware of the broad variety of resources that UCSB has to offer (see their drop-in hours at food.ucsb.edu). You are also urged to contact the professor or teaching assistant if you are comfortable doing so. Please visit food.ucsb.edu for additional resources including [Calfresh](http://calfresh.org), and the [AS Food Bank](http://asfoodbank.org).

Campus Learning Assistance Service

Location: Student Resource Building 3210 | 805.893.3269 | <http://clas.sa.ucsb.edu/>

CLAS helps students increase their mastery of course material through course-specific tutoring and academic skills development. The tutorial groups and drop-in tutoring schedules are posted on the website. CLAS also provides workshops and counseling in test-taking as well as paper-writing skills.

Counseling Services (CAPS)

Location: Building 599 | 805.893.4411 | <http://caps.sa.ucsb.edu/>

Counseling Services offers counseling for personal concerns and crisis intervention, stress management, self-help information, and connections to off-campus mental health resources.

There is a Mental Health Peer Services in CAPS that offers drop-in peer counseling, massage & egg chairs, workshops on managing stress (and many other topics), as well as one-on-one sessions with a peer to help students learn coping skills to reduce anxiety (School Anxiety Program).

CARE (Campus Advocacy, Resources & Education)

Location: Student Resource Building, 1st Floor | <http://wgse.sa.ucsb.edu/Care/>

Provides confidential advocacy and support to anyone impacted by sexual assault, dating/domestic violence and stalking.

Student Engagement and Leadership (SEAL)

Location: Student Resource Building 1104 & 2260 | 805.893.4569 | <https://seal.sa.ucsb.edu/>
promotes undergraduate and graduate student engagement and development through co-curricular programs, including campus organizations, fraternities and sororities, leadership development, and civic engagement.

ONDAS Student Center

Location: Kerr Hall 1150 | 805.893.3457 | <http://ondas.ucsb.edu/>
The OSC offers academic support, mentoring, special programming, and community for all UCSB students, especially first-generation students.

Transfer Student Center

Location: UCSB Library, First Floor, Ocean Side | <http://www.transfercenter.ucsb.edu/>
A space for transfer students to make connections, find academic support, mentoring, and special programs.

Undocumented Student Services

Location: 2210 Student Resource Building | 805.893.5609 <http://www.sa.ucsb.edu/DreamScholars/>
USS provides general counseling to undocumented and mixed status students. Services include access to student mentors, programs and legal service referrals.

Educational Opportunity Program

Location: Student Resource Building, Room 2210 | 805.893.4758 | <http://eop.sa.ucsb.edu/>
EOP provides advising, mentoring, and programming for first generation and income eligible students.

Office of International Students & Scholars

Location: Student Resource Building, Room 3130 | 805.893.2929 | <http://oiss.sa.ucsb.edu/oiss-home>
OISS provides immigration support for the UCSB community, advising for international students, and cultural programming.

Academic Initiatives

Number: 805.893.2720 | <http://academics.sa.ucsb.edu/>
Student Affairs Academic Initiatives facilitates student academic and leadership opportunities, and community engagement.

If any of these links to student services is invalid or if you know that it has changed, please let the professor know!
